

TPA12

Project

Grand Union Development Phase 1 & 2
Wembley

Main Contractor

St George London

Total Project Value

£300 million

Project Overview – Grand Union

The exciting development of a previously derelict industrial site into a brand-new community on the banks of the Grand Union Canal delivering over 3300 homes and 11 acres of public space.

Project Brief – Thermotec were contracted to carry out a complete design and install of our TPA12 Aquafloor underfloor heating system, This type of system is ideal to be used with lightweight anhydrite screed which Thermotec also supplied and installed. This is a cost-effective solution providing excellent UFH performance and comfort levels within the apartments.

Final Overview – Thermotec have enjoyed being a part of this very exciting development. The project has certainly had its challenges but collaboratively we have successfully completed Phase 1 and are very much looking forward to completing Phase 2 in 2025! The project has been managed, installed and supervised by Thermotec.
